

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Hybrid materials and fillers

Course

Field of study

Chemical Technology

Area of study (specialization)

Composites and Nanomaterials

Level of study

Second-cycle studies

Form of study

part-time

Year/Semester

I/2

Profile of study

general academic

Course offered in

English

Requirements

compulsory

Number of hours

Lecture

15

Laboratory classes

30

Other (e.g. online)

Tutorials

0

Projects/seminars

0

Number of credit points

3

Lecturers

Responsible for the course/lecturer:

Professor Teofil Jesionowski

Responsible for the course/lecturer:

e-mail: Teofil.Jesionowski@put.poznan.pl

tel. +48 61 665-37-20

Faculty of Chemical Technology

Institute of Chemical Technology and
Engineering

Berdychowo 4, PL-60965 Poznań

Prerequisites

Structured and systematic knowledge in the field of general and inorganic chemistry, organic chemistry and chemical technology as well as polymers, nanomaterials and composites, and apparatus of the chemical industry (the curriculum of the full-time first cycle studies). Ability to solve elementary engineering problems based on knowledge. Ability to obtain information from the indicated sources in a foreign language. Understanding the need for further education, understanding the need to expand their competences, readiness to cooperate within a team.

Course objective

Obtaining theoretical and practical knowledge in the field of technology of nanomaterials, hybrid materials and fillers. Ability to select chemical raw materials and semi-finished products used in different area of technology including polymer processing, environmental protection and modern materials science. Understanding the basic industrial processes and unit operations related to the technology of obtaining and modifying of inorganic polymer fillers. Understanding the methods of obtaining inorganic and inorganic-organic products, including hybrid products with defined structural and morphological properties. Additionally information related to biopolymers, scaffolds, and dyes and pigments will be given.

Course-related learning outcomes

Knowledge

K_W2 - has expanded and in-depth knowledge in chemistry and other related areas of science, allowing to formulate and solve complex tasks related to chemical technology

K_W3 - has knowledge of complex chemical processes, including the appropriate selection of materials, raw materials, methods, techniques, apparatus and equipment for carrying out chemical processes and characterizing the products obtained

K_W6 - has expanded knowledge of the latest chemical and material technologies, including advanced materials and nanomaterials technologies, knows current trends in the development of chemical industrial processes

K_W7 - knows modern methods of testing the structure and properties of materials, necessary to characterize raw materials and products of the chemical and related industries

K_W11 - has a well-established and expanded knowledge of the selected specialty

K_W13 - has extended knowledge of advanced devices and apparatus used in chemical technology

K_W14 - has knowledge of selected issues of modern chemical knowledge and aspects of copyright and industrial property

Skills

K_U1 - has the ability to obtain and critically evaluate information from literature, databases and other sources, and formulate opinions and reports on this basis

K_U2 - has the ability to work in a team and lead a team

K_U5 - can independently determine the directions of further education and implement self-education

K_U11 - is able to properly verify the concepts of engineering solutions in relation to the state of knowledge in technology and chemical engineering

K_U12 - has the ability to adapt knowledge of chemistry and related fields to solve problems in the field of chemical technology and planning new industrial processes

K_U15 - can critically analyze industrial chemical processes and introduce modifications and improvements in this area, using the acquired knowledge, including knowledge about the latest achievements of science and technology

K_U16 - has the ability to assess the technological suitability of raw materials and the selection of the technological process in relation to the quality requirements of the product

K_U23 - has the ability to use the knowledge acquired under the specialty in professional activity

Social competences

K_K1 - is aware of the need for lifelong learning and professional development

K_K2 - is aware of the limitations of science and technology related to chemical technology, including environmental protection

K_K4 - observes all rules of teamwork; is aware of the responsibility for joint ventures and achievements in professional work

K_K6 - can think and act in a creative and entrepreneurial way

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture - written/oral exam graded on the basis of a percent system: 3 - 50.1%-70.0%; 4 - 70.1%-90.0%; 5 - min. 90.1%.

Laboratory - reports from laboratory exercises, oral/written answer, solving scientific problems, criterion: 3 - basic theoretical and practical knowledge, preparation skills concerning reports from laboratories, basic participation in theoretical and practical classes without additional involvement; 4 - practical preparation supported by theoretical knowledge, the ability to formulate the right conclusions from the data obtained during the laboratory, active participation in classes supported by the desire to acquire additional practical and theoretical knowledge; 5 - complete preparation for classes, the ability to draw conclusions at an advanced level, and also posed defense, preparation of project assumptions at a high substantive level and their presentation, precise execution of entrusted tasks, independent search additional theoretical knowledge, coordination of work in a research team, an ambitious approach to the subject matter.

Programme content

Nanomaterials - types and characteristics

Fillers - definitions and general characteristics

Hybrid and composite materials - examples, characteristics and application

Natural and synthetic fillers

Surface modification, hydrophobization, organic and inorganic modifiers

Pigments and dyes

Biopolymers

Barrier composites

Techniques used for characterization of nanomaterials and composites

Teaching methods

Lecture: multimedia presentation or e-learning tools.

Laboratory - teaching materials for the laboratory in pdf files, practical exercises.

Bibliography

Basic

1. G. Wypych, Handbook of fillers, 3rd ed., ChemTec Publishing, Toronto 2010.
2. M. Xantos, Functional fillers for plastics, Wiley-VCH, New York 2010.
3. E.F. Vansant, P. van der Voort and K.C. Vrancken, Characterization and chemical modification of the silica surface, Elsevier, Amsterdam 1995.
4. J.A. Rodriguez, M. Fernandez-Garcia, Synthesis, properties and applications of oxide nanomaterials, John Wiley & Sons, New Jersey 2007.
5. Ch. Kumar, Nanostructured oxides, Wiley-VCH, Weinheim 2009.
6. A. Szymański, Biomineralizacja i Biomateriały, Wydawnictwo Naukowe PWN, 1991.
7. P. Gomez-Romero, C. Sanchez, Functional Hybrid Materials, Wiley, 2003.

Additional

1. Scientific articles related to the content of the lecturers.
2. V.K. Thakur, M.K. Thakur, Functional Biopolymers, Springer, 2018.
3. A.W. Adamson, A.P., Gast, Physical chemistry of surface, John Wiley & Sons, Toronto 1997.
4. Laboratory materials.

Breakdown of average student's workload

	Hours	ECTS
Total workload	90	3,0
Classes requiring direct contact with the teacher	60	2,0
Student's own work (literature studies, preparation for tests/exam, project preparation) ¹	30	1,0

¹ delete or add other activities as appropriate
